Howard Capital Management's (HCM) HCM-BuyLine®

was developed by Vance Howard after the devastating financial losses of Black Monday in 1987. As a central feature of HCM's overall investment strategy, it is used to identify macro trends in global markets to determine appropriate portfolio positioning.

For decades, the HCM-BuyLine® has demonstrated the ability to capture long-term risk-adjusted returns through full market cycles.

Key Features

- Designed to be an emotionless and mathematically driven process
- Signals when to move to cash and/or lower risk investments during market declines
- Greater capital might be available to reinvest during market advances

There can be no guarantee that the HCM-BuyLine® indicator will perform as anticipated. Stoploss protection will not necessarily limit your losses to the desired amounts due to the limitations of the HCM-BuyLine®, market conditions, and delays in executing orders. It is not an actual stoploss order that automatically sells securities in the portfolio at a certain price. There can be no guarantee that the HCM-BuyLine® indicator will perform as anticipated. Stoploss protection will not necessarily limit your losses to the desired amounts due to the limitations of the HCM-BuyLine®, market conditions, and delays in executing orders. It is not an actual stoploss order that automatically sells securities in the portfolio at a certain price.

A DISCIPLINED STRATEGY

HCM-BuyLine® Historical Chart

- S&P 500 (SPY)
- Reduced Equity Exposure
- Further Reduced Equity Exposure
- Fully Invested

This System aims to bypass major declines as shown in 2008.

The HCM-BuyLine® signaled a reduction during the onset of COVID-19.

Entering back into the market is as important as bypassing declines for long-term growth.

GLOBAL TRENDS TIMELINE

MARCH 2000
Tech Bubble Burst

SEPTEMBER 2001
World Trade Center Terror Attacks

MARCH 2007
Beginning of the Sub-Prime Mortgage Crisis

JANUARY 2008
The US Recession is Underway, Unemployment Soon Reaches 10%

MAY 2010
Flash Crash: Dow Has Second Largest Point Swing

SEPTEMBER 2011
EU Sovereign Debt Crisis; US Credit Rating Downgrade

JUNE 2016
"Brexit": Britain Votes to Exit the E.U.

2018
Rise of Computerized Trading

MARCH 2020
COVID-19 Global Pandemic

The Line indicated on this the S&P 500. Historical performance for the SPDR® S&P 500® ETF Trust (Symbol: SPY) is provided for informational and illustrative purposes only. SPY seeks to provide investment results that, before expenses, correspond generally to the price and yield performance of the S&P 500® Index, a diversified large cap U.S. index that holds companies across all eleven Global Industry Classification Standards sectors. SPY performance is shown net of internal fund expenses, including fund management fees and transaction costs. It should not be assumed that your account or any Howard CM strategy or model holdings correspond directly to SPY or any comparative benchmarks. The graphic above and on the right represents the dates on which the HCM-BuyLine® indicator signaled a change in market conditions. The graphic does not represent actual trading activity. The HCM-BuyLine® is an indicator only and will not automatically allocate and/or re-allocate client assets. Actual trading activity may take time to research and implement and, as a result, trading activity may lag behind the signals provided by the HCM-BuyLine® indicator. There can be no guarantee that the HCM-BuyLine® indicator will perform as anticipated or that following any signals provided by the HCM-BuyLine® indicator will result in a profitable trade. All investments are subject to risks similar to those of stocks. Investment returns will fluctuate and are subject to market volatility, so that an investor's shares when redeemed may be worth more or less than their original costs. There are unique potential risks associated with the specific asset classes that a Mutual Fund or ETF represents. You should carefully consider the risk, charges, and expenses of an ETF prior to investing. There can be no guarantee that the HCM-BuyLine® indicator will perform as anticipated. Stoploss protection will not necessarily limit your losses to the desired amounts due to the limitations of the HCM-BuyLine®, market conditions, and delays in executing orders. It is not an actual stoploss order that automatically sells securities in the portfolio at a certain price. There can be no guarantee that the HCM-BuyLine® indicator will perform as anticipated. Stoploss protection will not necessarily limit your losses to the desired amounts due to the limitations of the HCM-BuyLine®, market conditions, and delays in executing orders. It is not an actual stoploss order that automatically sells securities in the portfolio at a certain price.

THE HCM-BUYLINE®

Proprietary, quantitative indicator

The HCM-BuyLine® uses a proprietary quantitative investment model to determine when we should be in or out of the market. The HCM-BuyLine® uses trend analysis to help identify the broad trend in the equity market. When the trend is down, we reduce exposure to equities, and when the trend is up, we increase exposure to equities.

This non-emotional, mechanical, and repeatable system helps take the guesswork out of HCM investment decisions. Even though not every HCM-BuyLine® signal will result in a profitable trade, the HCM-BuyLine®'s ability to preserve capital using math in major market downturns while pursuing opportunities for growth provides HCM with the potential to outperform the market on a long-term basis. For example, a portfolio which suffers a 30% loss, takes a 43% gain to return to the previous portfolio value. When the impact of a major market downturn is reduced, the investor is left better situated compared to a buy-and-hold strategy. However, avoiding market downturns is just the start of an effective risk management system. The manager also needs to know when to be invested in equities. Here again, the HCM-BuyLine® comes into play, signaling a potential uptrend.

The goal is not to call tops and bottoms of the market, but instead to identify macro-trends and cycles through our quantitative investment model.

The graphic above represents the dates on which the HCM-BuyLine® indicator signalled a change in market conditions. The graphic does not represent actual trading activity. The HCM-BuyLine® is an indicator only and will not automatically allocate and/or re-allocate client assets. Actual trading activity may take time to research and implement and, as a result, trading activity may lag behind the signals provided by the HCM-BuyLine® indicator. There can be no guarantee that the HCM-BuyLine® indicator will perform as anticipated or that following any signals provided by the HCM-BuyLine® indicator will result in a profitable trade.

THE HCM-BUYLINE® IN ACTION

2008 Market Collapse

The HCM-BuyLine® aims to bypass the decline by signaling when to move to the safety of money markets and/or short-term bonds. Highlighting the financial meltdown in 2008, the HCM-BuyLine® signaled to exit the stock market.

VANCE HOWARD

CEO and Portfolio Manager

"We practice active money management*. We do not believe in buy and hold, nor do we favor asset allocation. We must be strategic and tactical to bring our best defense against a market that does not think or feel."

Vance Howard specializes in identifying market trends based on his proprietary HCM-Buyline", a strict investment discipline developed through years of research and experience.

His investment management abilities are utilized in many types of trading systems, with investments including mutual funds, exchange-traded funds, individual equities and cash equivalents.

"We do not believe in buy and hold, nor do we favor asset allocation" says Mr. Howard of his philosophy. "Rather, we use a combination of both strategic and tactical approaches. The market does not think or feel. It is what it is, which is why our modus operandi is active money management!" Howard Capital Management, Inc., a SEC registered investment advisory firm, provides fee-based investment management to individuals and institutions using the HCM-Buyline®

Sharon Killion is a former Educator who began helping Educators with their 403b's over 24 years ago. She followed her father's footsteps by becoming a Wealth Advisor/Retirement Planner working with College Professors in particular. Sharon's father began helping University Professors with their 403b's in 1969! Education is at the heart of everything she does in her practice.

As a former Educator she is passionate about helping University Professors with planning and investing for retirement. She sees many Professors who need and want her help in setting appropriate risk levels for their portfolios and guidance in investing. Many Professors do not understand that many times at their University they have more investment options for their 403b's than they realize.

Sharon has found that Professors want Professional Advice from someone who understands their work, their retirement plan options within their existing University 403b plan and someone who speaks to them in simple language and of course, they want to work with someone who cares about them.

Sharon is a Chartered Financial Consultant (ChFC) and is also a Retirement Income Certified Professional (RICP) and is a continuous lifelong learner. Sharon loves being outdoors, hiking, exercising, reading and travel.

The Professor's Advisor

WE LOOK FORWARD TO SPEAKING WITH YOU

Howard Capital Management, Inc. ("Howard CM") is an SEC-registered investment advisor with its principal place of business in the State of Georgia. SEC registration does not constitute an endorsement of Howard CM by the SEC, nor does it indicate that Howard CM has arraigned a particular level of skill or ability. Howard CM only transacts business where it is properly registered or is otherwise exempt from registration. Howard CM offers its investment methodology through multiple programs that may invest in exchange traded funds, variable annuities, Bonds and Mutual Funds. There is no certainty that any investment or strategy (including the investments and/or investment strategies recommended by the advisor), will be profitable or successful in achieving investment objectives.

The HCM- BuyLine® graph represents some of the dates on which our proprietary indicator, the HCM-BuyLine®, identified changes in the market trend. Buys and sells may or may not have occurred on the exact dates shown. These dates do not necessarily reflect transactions applied to every individual account. Also, certain products, custodians and portfolios may have a delay in execution. When the HCM-BuyLine® indicates a bull market, Howard CM then identifies the particular mutual funds, ETFs or individual stocks that we believe have the best return potentials in the current market from the universe of assets available in each given program and invests in them. When the HCM-BuyLine® indicates a bear market, Howard CM moves clients' investments to less risky alternatives. Howard CM's performance results: 1) are presented net of advisory fees of 2.2% paid monthly in arrears, 2) are net of transaction fees and commissions, 3) are not net of custodial fees, and 4) reflect the reinvestment of dividends and capital gains. Past performance is not a guarantee or a reliable indicator of future results. Therefore, no current or prospective client should assume that the future performance of any specific investment, investment strategy (including the investments and/or investment strategies recommended by the advisor), will be profitable or equal to past performance levels.

The actual performance of an individual client's portfolio may be lower or higher than the performance of the Howard CM portfolio strategy. The returns of the strategy in certain years were higher than the returns of its comparative benchmark index. These returns were the result of certain market factors and events that may not be replicated in the future. All investment strategies have the potential for profit or loss. Changes in investment strategies, contributions or withdrawals may materially alter the performance, strategy and results of a client's portfolio. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will either be suitable or profitable for a client's investment portfolio. Howard CM may involve an above-average turnover, which could have a negative impact upon the net after tax gain experienced by an individual client in a taxable account. Economic factors, market conditions, and investment strategies will affect the performance of any portfolio and there are no assurances that it will match or outperform any particular benchmark for measuring the performance of a portfolio.

Historical performance for the SPDR® S&P 500® ETF Trust (Symbol: SPY) is provided for informational and illustrative purposes only. SPY seeks to provide investment results that, before expenses, correspond generally to the price and yield performance of the S&P 500® Index, a diversified large cap U.S. index that holds companies across all eleven Global Industry Classification Standards sectors. SPY performance is shown net of internal fund expenses, including fund management fees and transaction costs. It should not be assumed that your account or any Howard CM strategy or model holdings correspond directly to SPY or any comparative benchmarks. LARL.BLB.MNR.1122.020624
